

All CCS and Cross-sectoral Design & Fashion Czechia Artificial Intelligence Greening Practices Creative Skills

European Creative Skills Week 2025: Create. Transform. Regenerate!

CREATIVESUNITE

Co-funded by the European Union

The European Creative Skills Week opens doors 22-26 September in Prague and online. This year's edition proposes a Cyanotypes framework combining the skills required to address the digital, AI, green, funding and social resilience challenges of today.

Creative Skills Week 2025 (CSW2025) brings together educators, policymakers, sector leaders and artists to share, shape and promote new approaches to lifelong learning, re-skilling, and up-skilling.

This year's edition introduces a CYANOTYPES Framework to support skills-building. The framework is designed towards a resilient, future-ready sector, ahead of urgent transitions of today, including "digital advancements, the green shift, funding cuts, growing concerns on the implications of Artificial Intelligence, the rise of populism, and skills shortages".

According to the organisers: "Together we ask: how can we thrive amid complexity and uncertainty? What competences do we need to meet the future? How can we reimagine learning and shape it collaboratively? What does it mean to contribute to futures worth creating?".

Speakers include academics, artists and CCS practitioners and CCS civil society representatives. Although the in-person list is full, there is also the possibility to participate in the online sessions of the CCW2025 programme. To register click here.

CSW2025 is co-organised with EIT Culture & Creativity, the Creative Pact for Skills, SACCORD, and CYANOTYPES, and co-funded by the European Union.
