## Bauhaus Earth | Open Call Fellowship

# Applications are open until the 23rd of April 2023.

The first Open Call for Bauhaus Earth fellowships is now open. Bauhaus Earth will receive proposals for experimental projects that produce new knowledge on local, biobased, and circular construction and contribute to the development of a powerful aesthetic for a sustainable architecture of the future.

The Bauhaus Earth Fellowship Program (BE-FELLOW) welcomes a broad spectrum of emerging international practitioners in the fields of architecture, design and engineering, art, as well as interdisciplinary constellations of architectural production. BE-FELLOW is designed to provide Fellows with the financial support and the intellectual and professional environment to intensively pursue their promising experimental ideas and new design approaches in a focused manner.

Fellowship projects are designed to be open-ended and are developed and implemented in close collaboration with the BE-FELLOW's team. Projects are framed by clear research questions and typically target the production of architectural artifacts of manageable scale that serve as tangible and measurable demonstrations of new ways of building. They should aim for longevity and to be integrated in a real-world, social context.

BE-FELLOW is a collaboration between Bauhaus Earth and Experimental. It is based in Berlin and Brandenburg and complements the practice oriented LAB and global THINK TANK of Bauhaus Earth.

Fellows receive financial support for the implementation of the project on the basis of their project specific calculation included in the application form (approx. 4.000EURO/month). In Berlin, Fellows have free access to the LAB and office space at Marienpark, which includes a workshop with technical support.

Deadline: 23 April 2023
