European Union | Vocational Education and Training and The Green Transition

EU released a publication on inspiring practices of vocational education and training and the green transition.

The transition to an environmentally sustainable, circular and climate-neutral economy has significant social, economic and employment impacts. Ensuring that all citizens obtain the necessary knowledge, competences, skills and attitudes to cope with these changes is vital to a socially-just transformation of the EU. Vocational education and training (VET) has a key role to play to help young people and adults develop skills so they can thrive in their careers and lives. The European Education Area Working Group on VET and the Green Transition enables technical exchanges and contributions to help countries implement the principles and objectives of the Council Recommendation on vocational education and training, and the Osnabrück Declaration. As part of its mandate, this Working Group has collected a set of inspiring practices from across Europe, presented in a Compendium.
